

Development Technician

Permanent

Requirement for a technician to work within an engineering team that consists of software, mechanical and electronic engineers.

Pektron designs and manufactures a wide range of products for Gas, Automotive, Safety and Consumer industries and typical systems are: Vehicle Body Controllers, Immobilisers, Alarms, Telematics, Display, Gas Controls, Driveline and Transmission Control.

This is an opportunity for someone to have varied and interesting work in an engineering support role. This role is varied but does include:

- Design of Test Equipment Hardware
- Building And Servicing Custom Test Equipment
- Wiring Harnesses & Connectors
- Assembly Of Prototype PCBs, Both SMD And Leaded
- Responding To Breakdowns Of Test Equipment On The Production Line

Pektron employs a wide range of staff and therefore successful and motivated candidates can progress into design or production engineering positions.

Experience

General Interest In Electronics
Good Soldering Skills
Building Of Harnesses
Wiring & Crimping
General Fault Finding Of Electrical / Electronic Circuits
Light Metalwork & Drilling Enclosures

Essential Attributes

Self Motivated
Team Player
Pride In Their Quality Of Work

Additional Experience That Would Be An Advantage – Not Essential

Configuring PCs
Simple Electronic Design: Analogue / Digital
Debugging of Visual BASIC programs
PCB Layout
